FINAL RELIABILITY EVIDENCE

Regional Reliability Review

Atlas service rollout - validation evidence through 2026-08-31 18:00 UTC

Report status FINAL	**Evidence cutoff** 2026-08-31 18:00 UTC
Owner Reliability Engineering	**Decision scope** Regional validation evidence

Authoritative-use rule. The final table on page 3 supersedes the preliminary table on page 2 and is the only reliability evidence finalized at the decision cutoff.

Purpose and authority

This review records regional completion and open severity counts for the Atlas rollout. It preserves the preliminary snapshot for traceability while identifying the final evidence that governs the cutoff review.

How to read the evidence

Page 2	Preliminary validation retained only to show evidence evolution. It is superseded and must not drive the decision.
Page 3	Final validation evidence at the cutoff. This is the authoritative reliability source for the rollout decision.

Scope boundary

This document reports reliability validation only. The rollout policy and regional capacity workbook remain separate, mutually necessary sources for the final launch decision.

PRELIMINARY - SUPERSEDED

Preliminary validation

Snapshot recorded 2026-08-29 18:00 UTC

Do not use for rollout authorization. This snapshot was replaced by the final evidence on page 3 and is retained only to document evidence evolution.

Table 1. Preliminary validation - superseded

Region	Completion	Open Sev-1	Open Sev-2	Evidence status
North	97%	0	1	Preliminary
Central	96%	0	2	Preliminary
West	94%	0	0	Preliminary
East	98%	0	0	Preliminary

At this preliminary snapshot, Central had two open Sev-2 issues and East had zero open Sev-1 issues.

Change-control status

Superseded. Subsequent validation changed the Central and East issue counts before the decision cutoff. Page 3 records those final values.

Traceability note: preliminary values remain visible to test whether an analyst follows source authority instead of selecting the most favorable table.

FINAL EVIDENCE AT CUTOFF

Final validation

Evidence finalized 2026-08-31 18:00 UTC

This final table supersedes the Preliminary validation table on page 2. It is the only reliability evidence finalized at the decision cutoff, 2026-08-31 18:00 UTC.

Table 2. Final validation

Region	Completion	Open Sev-1	Open Sev-2	Evidence status
North	97%	0	1	Final at cutoff
Central	96%	0	3	Final at cutoff
West	94%	0	0	Final at cutoff
East	98%	1	0	Final at cutoff

Evidence status: authoritative for reliability validation at the cutoff.

Material changes from preliminary

Region	Preliminary	Final at cutoff
Central	2 open Sev-2	3 open Sev-2
East	0 open Sev-1	1 open Sev-1

Evidence cutoff

Use the final values above for the 2026-08-31 18:00 UTC decision cycle. Later observations belong to a new review and do not alter this frozen evidence set.
